PROFESSIONAL SUMMARY

Mern Stack Developer with **3+ years** of production experience building enterprise-grade React applications and Node.js backends. At NDE, independently owned the complete frontend of a **Google Workspace-style platform** covering Drive, Docs and CRM with **15GB unified storage**, real-time WebSocket collaboration and pipelines handling **1,00,000+ records** across **15+ screens**. Delivered features end to end in an **Agile environment** with consistent on-time releases. Also built and deployed a full-stack MERN chat application with Socket.io, JWT authentication and Cloudinary media storage.

TECHNICAL SKILLS

Languages & Frameworks: React.js, Next.js, React Native, TypeScript, JavaScript (ES6+), HTML5, CSS3

UI Libraries & Styling: Material UI (MUI), Tailwind CSS, DaisyUI, SASS/SCSS, shadcn/ui, Responsive Design, MUI Theme Systems

State Management: Zustand, Redux Toolkit, React Context API, TanStack Query (React Query)

Data & Tables: TanStack Table, TanStack Virtual, React Hook Form

API & Real-Time: REST APIs, Axios, WebSocket, Socket.io, Yjs (CRDT)

Backend: Node.js, Express.js, MongoDB, Mongoose, JWT, bcrypt, Cloudinary, Multer

Database & ORM: MongoDB, PostgreSQL, Prisma

Tools & Practices: Git, GitHub, Vite, Figma, Postman, VS Code, npm, pnpm, Agile, Scrum, Render, Netlify, Vercel

PROFESSIONAL EXPERIENCE

Now Digital Easy (NDE)

Senior Frontend Developer

Aug 2024 – Present

Remote

- Sole frontend owner of an enterprise collaboration platform comparable to Google Workspace in scope with no senior oversight.
- Worked in an Agile Scrum environment with two-week sprints, daily standups and regular code reviews.

Drive Module

- Built a file management interface supporting nested folder hierarchies, full CRUD operations, multi-select and bulk actions as part of a **15GB unified storage system** shared across Drive, Mail, Meet and Chat modules without any UI performance issues.
- Used **TanStack Virtual** for list virtualization which reduced DOM node count by **80%** on large datasets and completely removed scroll lag on low-end devices.
- Used **TanStack Query useInfiniteQuery** for paginated API loading which reduced initial payload size and removed unnecessary data fetching on page load.
- Built file and folder drag-and-drop across deeply nested structures using **Atlassian Pragmatic DnD** with proper state cleanup after every drop.
- Fixed unnecessary re-renders across component trees using **useMemo**, **useCallback** and **React.memo** which reduced CPU usage noticeably on data-heavy screens.

Docs and CRM Modules

- Built a rich-text collaborative editor using **Lexical (Meta)** with a plugin-based toolbar. Integrated **Yjs CRDT** with a WebSocket provider so multiple users can edit the same document at the same time without conflicts or data loss.
- Built a reusable **TanStack Table** component used across all CRM screens with sorting, filtering, pagination, column pinning, column resizing, drag-and-drop reordering and bulk row actions. Handles **1,00,000+ records** with no performance problems.
- Built a Kanban pipeline board for sales teams, managed all CRM state using **Zustand**, and built an API-driven column visibility feature that saves each user's preferences to the backend and restores them on reload with no flicker.

Kodukku Classifieds Private Limited

React Developer

Dec 2023 – Jul 2024

Chennai, Tamil Nadu

- Joined as the first frontend developer on the team and set up the entire frontend codebase from scratch including component structure, folder organization and coding conventions.
- Built a real-time chat UI using React and **Socket.io-client** that handled room-based messaging, typing indicators and online presence without page refresh.
- Built an internal **HRMS** covering employee attendance tracking, payslip generation with **PDF export** and role-based access control for Admin, Manager and Employee roles.
- Used **Redux Toolkit** for global state management and **TanStack Query** for server-state caching and background sync to reduce redundant API calls.

Enrich Money

UI Developer

Dec 2022 – Aug 2023

Chennai, Tamil Nadu

- Built responsive UI components using **SASS** and Material UI for a financial trading platform working alongside Angular developers to match designs pixel-accurately.
- Built **HTML email templates** using 600px fixed table layouts with inline styles to ensure consistent rendering across Gmail, Outlook and Apple Mail.
- Found and fixed cross-browser bugs across Chrome, Firefox, Safari and Edge which reduced QA-reported frontend issues significantly.

PROJECTS

Chatty | *React, Node.js, Express, MongoDB, Socket.io, JWT, bcrypt, Cloudinary* | 🎥 Live Demo

- Built a full-stack real-time chat application using the MERN stack with a clean MVC backend structure separating controllers, models, routes, socket handlers and utilities into their own layers.
- Implemented JWT authentication stored in **httpOnly cookies** with bcrypt password hashing using salt round 10 and a protect route middleware that validates every request before it reaches the controller.
- Built the Socket.io messaging layer with room management using a dual-key Map so the same room is found whether user A or user B opens the conversation first. Message status updates from sent to delivered to read based on whether the receiver is currently online.
- Added typing indicators, real-time message deletion and online/offline presence tracking with automatic cleanup when a user disconnects. Used **Cloudinary** with Multer for image uploads with file type and size validation. Deployed on **Render, Netlify and MongoDB Atlas**.

File Preview Package | *React, TypeScript, Zustand, PDF.js, SheetJS*

- Built an internal React package for previewing PDF, image, Excel and video files. Used **SheetJS** to parse Excel files client-side and rendered the data in a virtualized grid using **TanStack Virtual** that handles over **1,00,000 rows** without freezing the browser. Includes annotation and draw mode with a **Zustand**-backed comment drawer.

MAVX Studio CRM | *Next.js 15, Supabase, Prisma, TanStack Query v5, Zustand v5, Tailwind CSS v4*

- Building a multi-tenant SaaS platform for photography studios as a **pnpm monorepo** covering lead pipeline, Kanban board, client management and payment tracking.
- Designed a **Prisma schema with 13+ models** covering leads, clients, bookings, payments, staff and studio settings with proper relational integrity at the **PostgreSQL** level.
- Set up **Supabase Auth** with Row Level Security policies so each studio can only access its own data with isolation enforced at the database level.
- Built the data layer using **TanStack Query v5** with optimistic updates and cache invalidation and managed UI state using **Zustand v5** with separate stores per domain to keep things predictable.

EDUCATION

Kalaigamar Karunanidhi Institute of Technology

Bachelor of Engineering, Mechanical Engineering

2018 – 2022

Coimbatore, Tamil Nadu
